Vaja 2 – Uporaba 10-bitnega A/D pretvornika

Napišite podprogram, ki bo izvajal A/D pretvorbo na vhodu AN0 (PORTA). Rezultat pretvorbe se zapisuje v dva registra (ADRESH in ADRESL). Izberite levo poravnavo rezultata. V ADRESH se vpiše zgornjih osem bitov pretvorjene vrednosti, v ADRESL pa se vpišeta spodnja dva bita pretvorjene vrednosti. Določite ločljivost pretvorjenega analognega signala, če upoštevate le rezultat v ADRESH.

Potek vaje:

1. Na začetku programa najprej opravimo inicializacijo oz. določitev načina delovanja A/D pretvornika.

   - Vrata PORTA so vhodna (vpis registra TRISA),
   - Dodelitev priključku AN0 na PORTA funkcijo analognih vhodov v mikrokrmilnik. To opravimo z vpisom ustreznih vrednosti bitov v register **ADCON1** – glej list št. 4!

- Izbor kanala, na katerem želimo izvesti A/D pretvorbo (ADCON0)
- Izbira takta za izvedbo A/D pretvorbe (ADCON0)
- Vklop A/D modula (ADCON0)

2. Glavni program naj se izvaja v obliki neskončne zanke. Za izvedbo A/D pretvorbe kličite podprogram Adpret.

3. V podprogramu startate pretvorbo s postavitvijo bita GO/DONE na logično 1

   - V podprogramu čakate, da se pretvorba konča. Ko se bit GO/DONE ponovno postavi na 0, je rezultat pretvorbe zapisan v dveh osembitnih registrih ADRESH in ADRESL. Bodite pozorni na levo ali desno poravnavo rezultata, ki ste jo izbrali pri inicializaciji A/D pretvornika.
   - Opazujte vrednosti v obeh registrih s pomočjo programskega orodja »WATCH«

Pri izvedbi vaje lahko uporabite naslednje ukaze:

• **MOVLW**	**k**	Naloži konstanto *k* v delovni register.

17.0 COMPATIBLE 10-BIT ANALOG-TO-DIGITAL CONVERTER (A/D) MODULE

The Analog-to-Digital (A/D) converter module has five inputs for the PIC18F2X2 devices and eight for the PIC18F4X2 devices. This module has the ADCON0 and ADCON1 register definitions that are compatible with the mid-range A/D module.

The A/D allows conversion of an analog input signal to a corresponding 10-bit digital number.

The A/D module has four registers. These registers are:

- A/D Result High Register (ADRESH)
- A/D Result Low Register (ADRESL)
- A/D Control Register 0 (ADCON0)
- A/D Control Register 1 (ADCON1)

The ADCON0 register, shown in Register 17-1, controls the operation of the A/D module. The ADCON1 register, shown in Register 17-2, configures the functions of the port pins.
