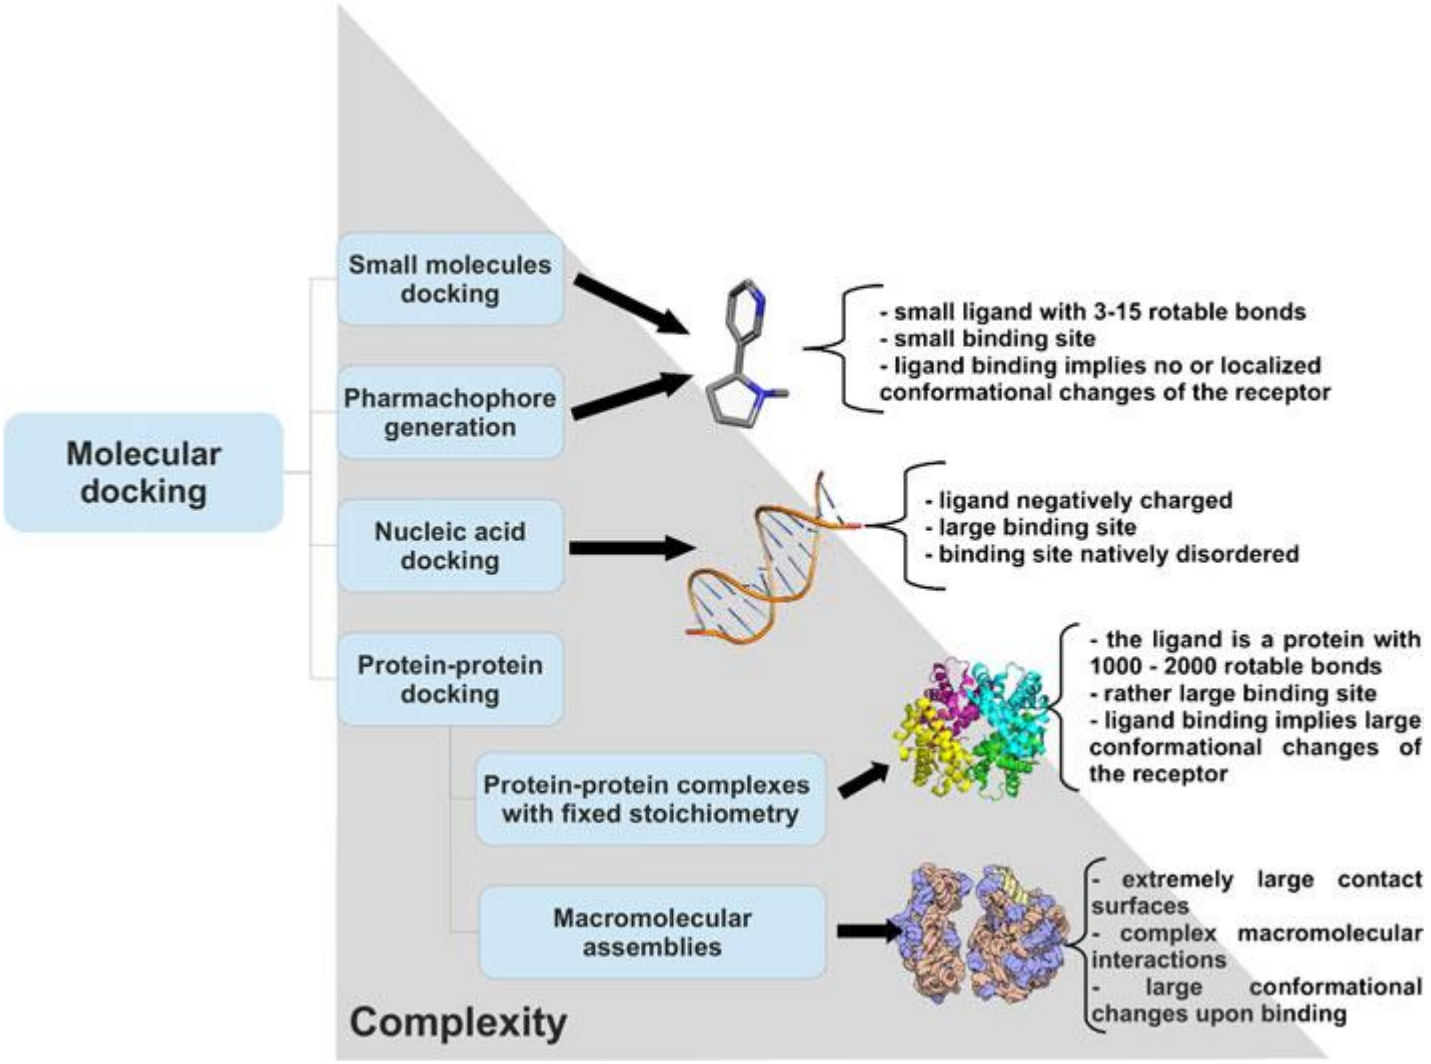
Molekulska umestitev

„Docking“ – računalniške metode za napovedovanje struktur kompleksov med molekulami z znanimi strukturami.



Mihasan. 2012. *J. Biosci*. 37(6)

Molekulska umestitev

„Docking“ – računalniške metode za napovedovanje struktur kompleksov med molekulami z znanimi strukturami.

1. Makromolekulska umestitev – protein-protein, protein-DNA
2. Umestitev malega liganda na/v makromolekulo

1. Umestitev togih teles („rigid-body docking“)
2. Umestitev gibljivih teles („flexible-body docking“)

1. *Ab initio* umestitev
2. Usmerjena umestitev (z uporabo eksperimentalnih podatkov)

Zgodovina: kot začetnike računalniške molekulske umestitve štejemo Levinthala in sod. (1975), ki so zgradili model interakcij med molekulami hemoglobina pri anemiji srpastih celic.

What is Docking?

*"Predicting the **best** ways two molecules will interact."*

- We need to *quantify* or *rank* solutions;
- We need a ***Scoring Function*** or force field.

*"Predicting the best **ways two molecules will interact**."*

- *(ways—plural)* The experimentally observed structure may be amongst one of *several predicted solutions*.
- We need a ***Search Method***.

algoritem za iskanje rešitev + funkcija za ovrednotenje rešitev

Molekulska umestitev – algoritmi za iskanje

TABLE 1

Search strategies in protein–protein docking

Search algorithms	Examples of docking programs
Exhaustive global search	
FFT-based search	FTDock, GRAMM, DOT, ZDOCK, MolFit, PIPER, F2DOCK, SDOCK, ASPDock, Cell-Dock
Spherical Fourier transform-based search	HEX, FRODOCK
Direct search in Cartesian space	SOFTDOCK, BIGGER, SKE-DOCK
Local shape feature matching	
Distance geometry algorithm	DOCK
Geometric hashing	PatchDock, SymmDock, LZerD
Genetic algorithm	GAPDOCK
Randomized search	
Monte Carlo search	RosettaDock, ICM, ATTRACT, HADDOCK
Particle swarm optimization	SwarmDock
Genetic algorithm	AutoDock
Post-docking approach	
Using advanced scoring functions	RPScore, ZRANK, PyDock, EMPIRE, DARS, DECK, SIPPER, PIE, MDockPP, etc.
Considering protein flexibility	MultiDock, SmoothDock, RDOCK, FireDock, FiberDock, EigenHex, etc.
Other ranking protocols	SDU, CyClus, CONSRANK, etc.

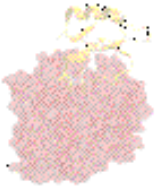
TABLE 2

Features of search algorithms in protein–protein docking

Search algorithms	Exhaustive search	Global search	Local search	Rigid docking	Flexible docking	Molecular representation	Computational cost
FFT-based correlation	√	√		√		Grid based	Low
SFT-based search	√	√		√		Harmonic surface	Low
Direct global search	√	√	√	√		Grid based	Medium–high
Local shape matching		√	√	√		Grid or surface	Medium
Randomized search		√	√	√	√	Atom based	High

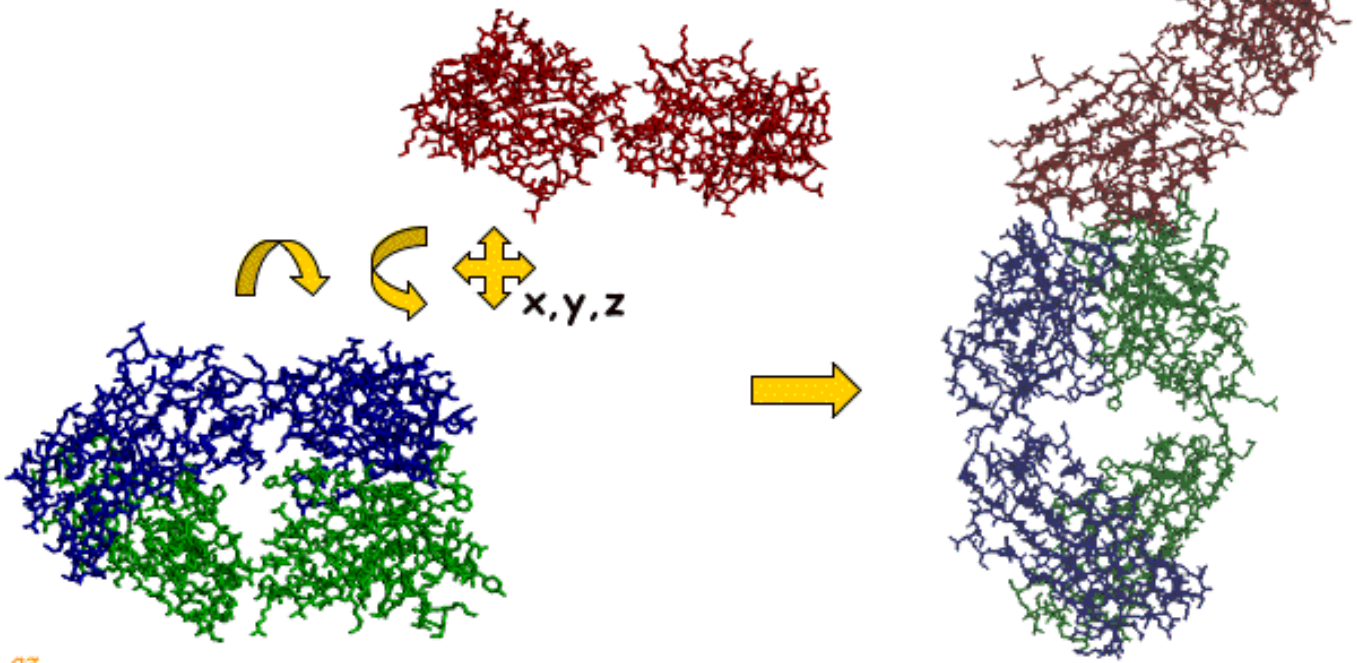
Huang. Drug Discov Today. (2014)

Molekulska umestitev – algoritmi za iskanje



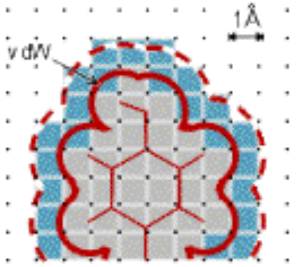
Explicit representation of the system

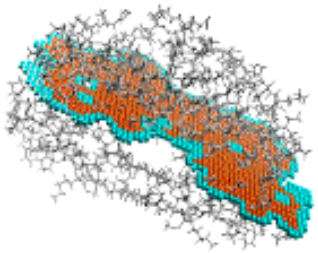
- x,y,z, coordinates of each atom for both molecules
- Search method will be in real space

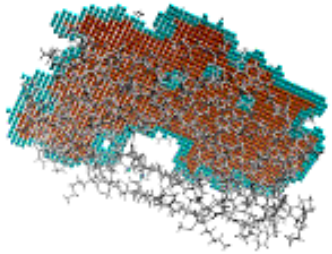


Grid-based representation of the system

- Discretise of the 3D structure of a protein onto a grid







(source: bigger/ Krippahl)

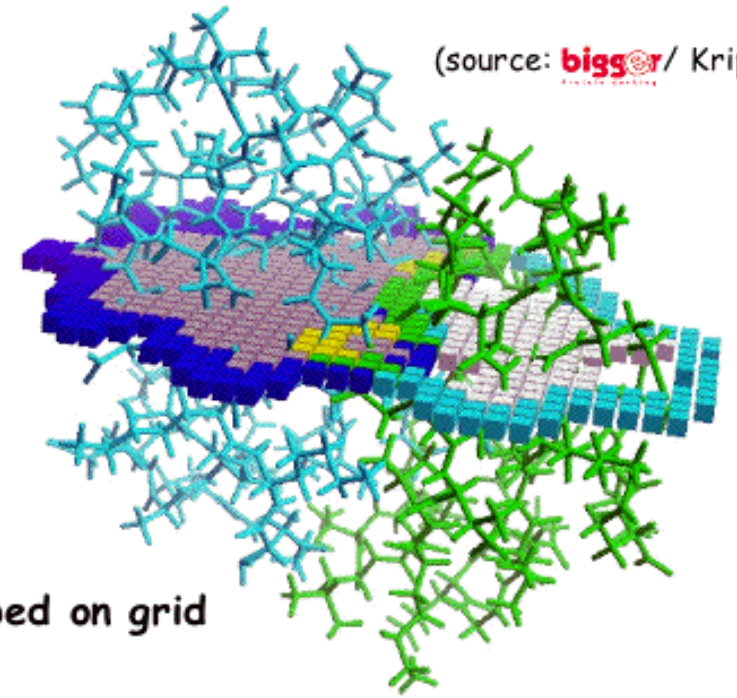
- "Shape representation" of the protein
- Resolution defined by grid spacing
- Docking will require to match the shapes ("geometric matching")
- Search in real or Fourier space

Grid-based representation of the system

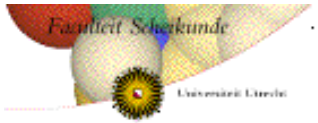
- Matching:
  - Surface overlap -> bonus
  - Core overlap -> penalty

Core
Surface
Core overlap

(source: biggar/ Krippahl)



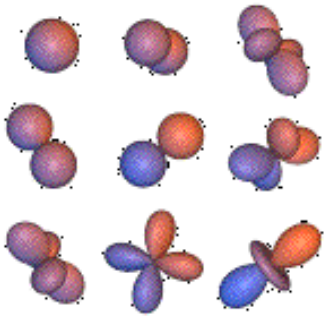
- Properties (e.g. charges, hydrophobicity) can be mapped on grid

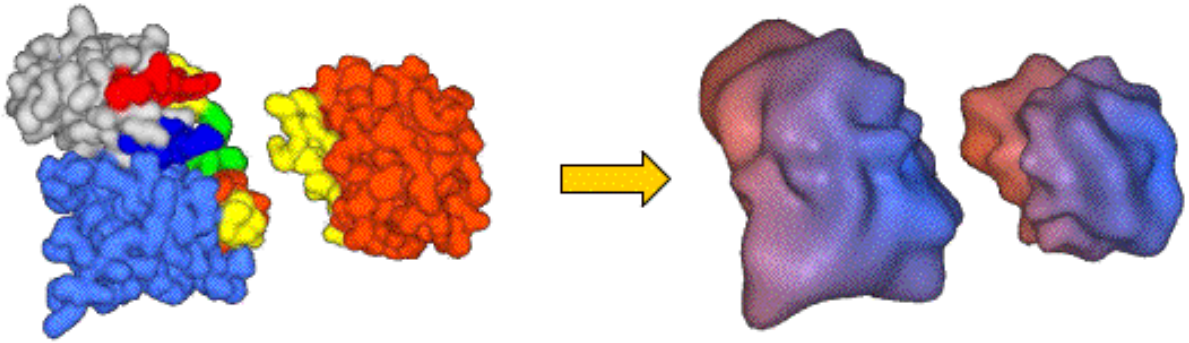


Surface representation of the system: spherical harmonics

- Surface of protein described by an expansion of spherical harmonics, e.g.

$$r(\theta,\phi) = \sum_{l=0}^{15} \sum_{m=-1}^{1} a_{lm} \psi_{lm}(\theta,\phi)$$

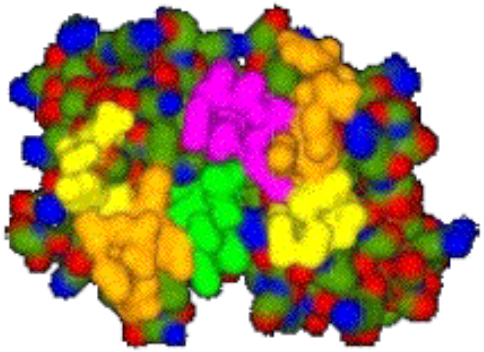


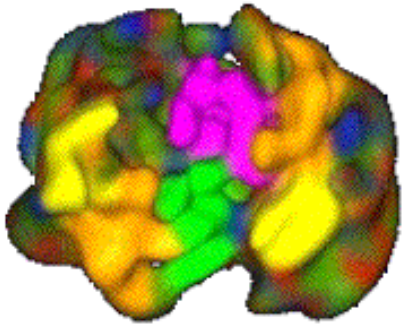


(source: HEX / Richie)

Surface representation of the system: spherical harmonics

- By varying the number of terms in the expansion the resolution can be tuned



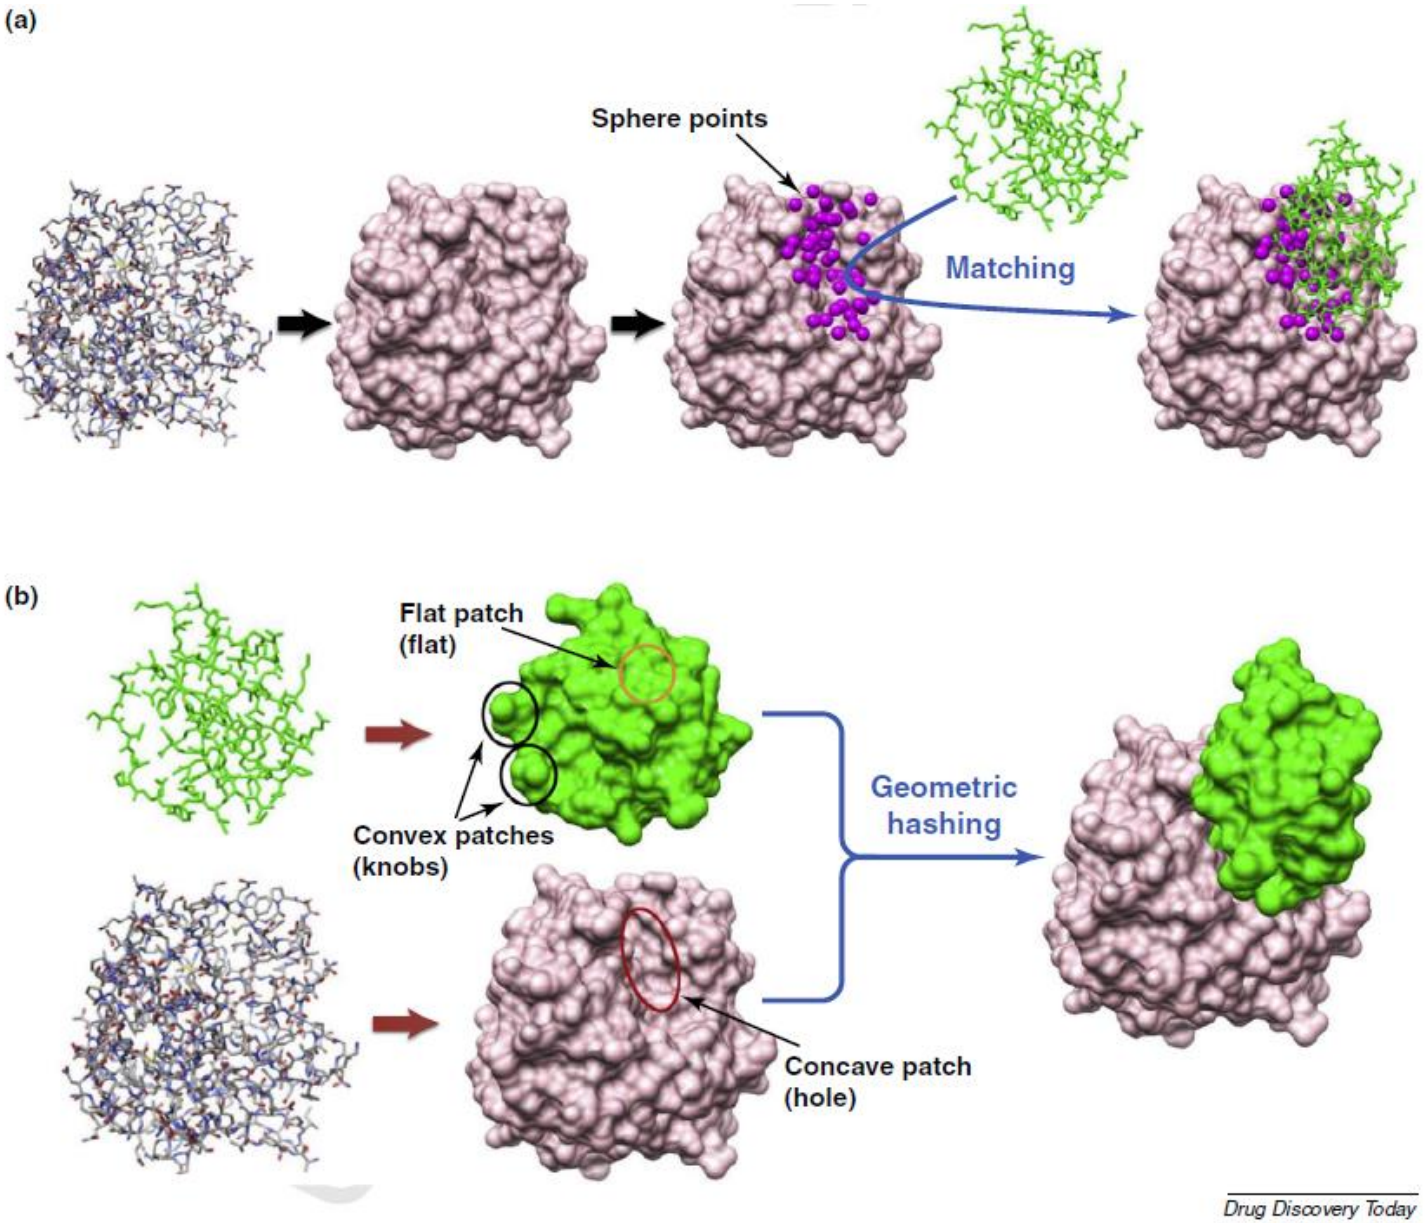


(source: HEX / Richie)

Molekulska umestitev – algoritmi za iskanje

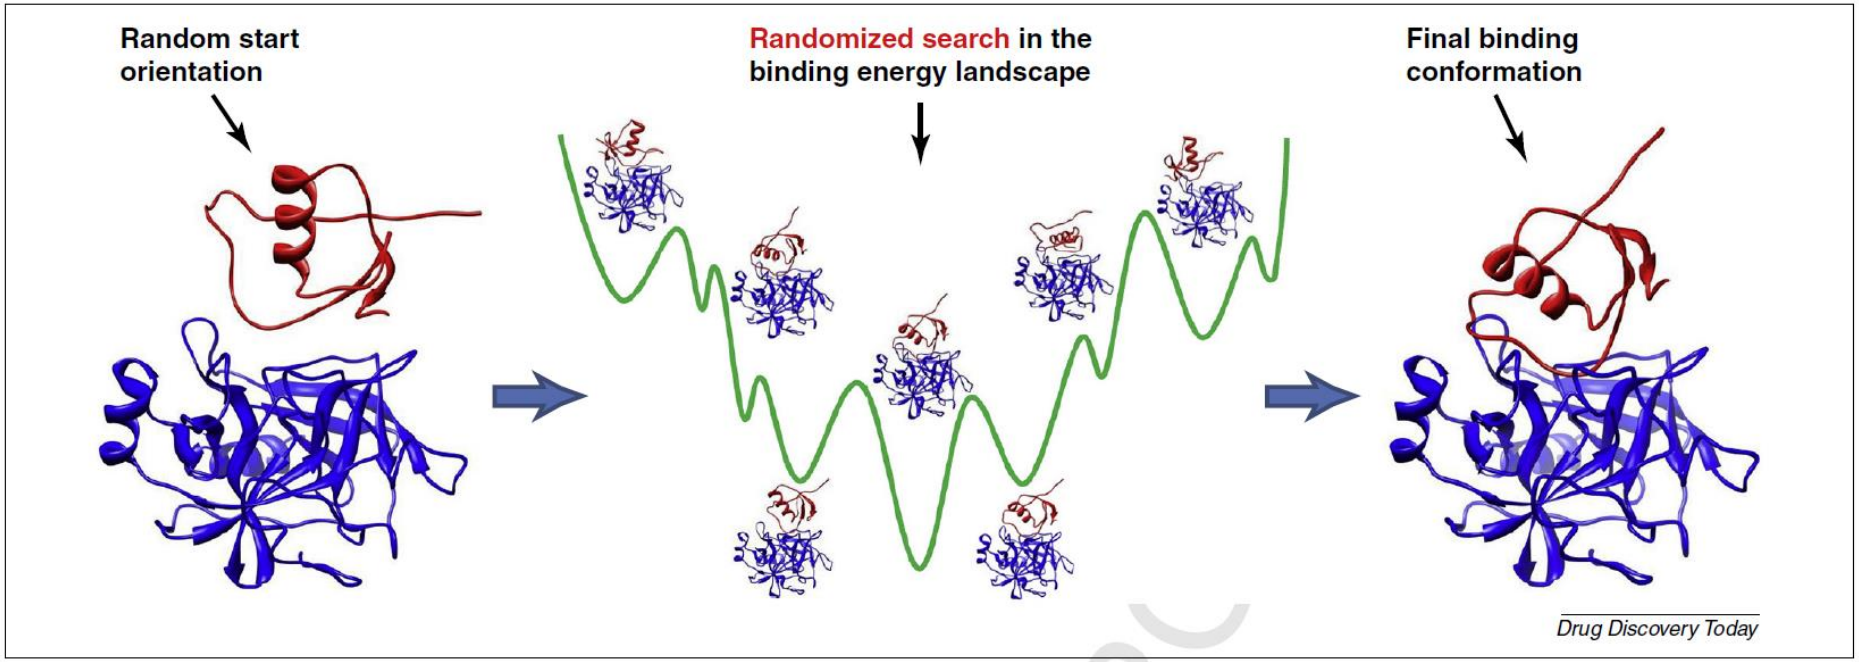
sphere matching

geometric hashing



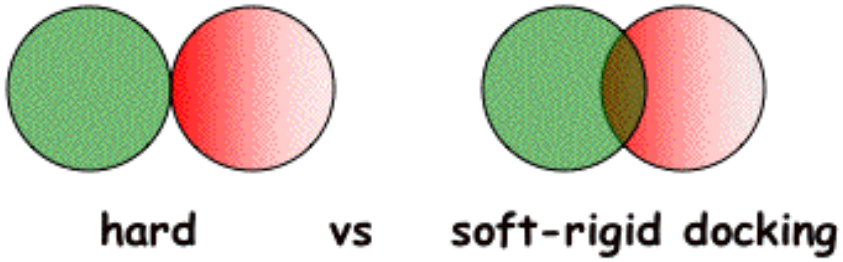
Molekulska umestitev – algoritmi za iskanje

naključno iskanje



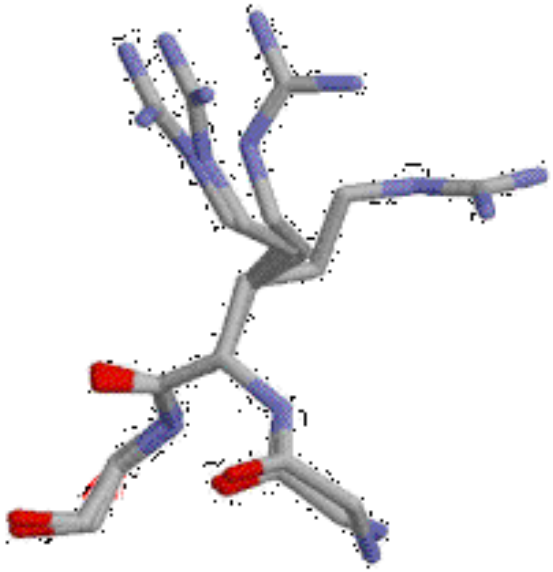
Molekulska umestitev – fleksibilnost

1. Implicitna fleksibilnost – umestitev togih teles s prekrivanjem

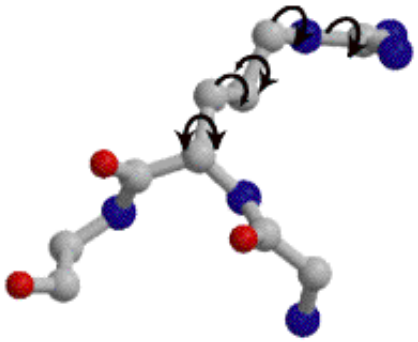


Rešitve je potrebno optimirati in odstraniti trke

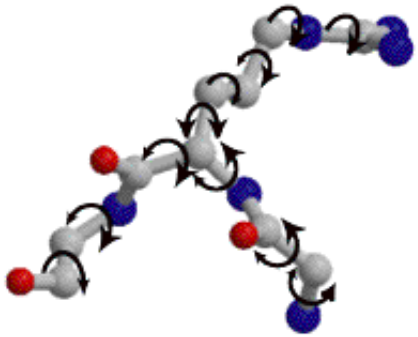
2. Zbirka energijsko ugodnih konformacij



3. Eksplicitna fleksibilnost

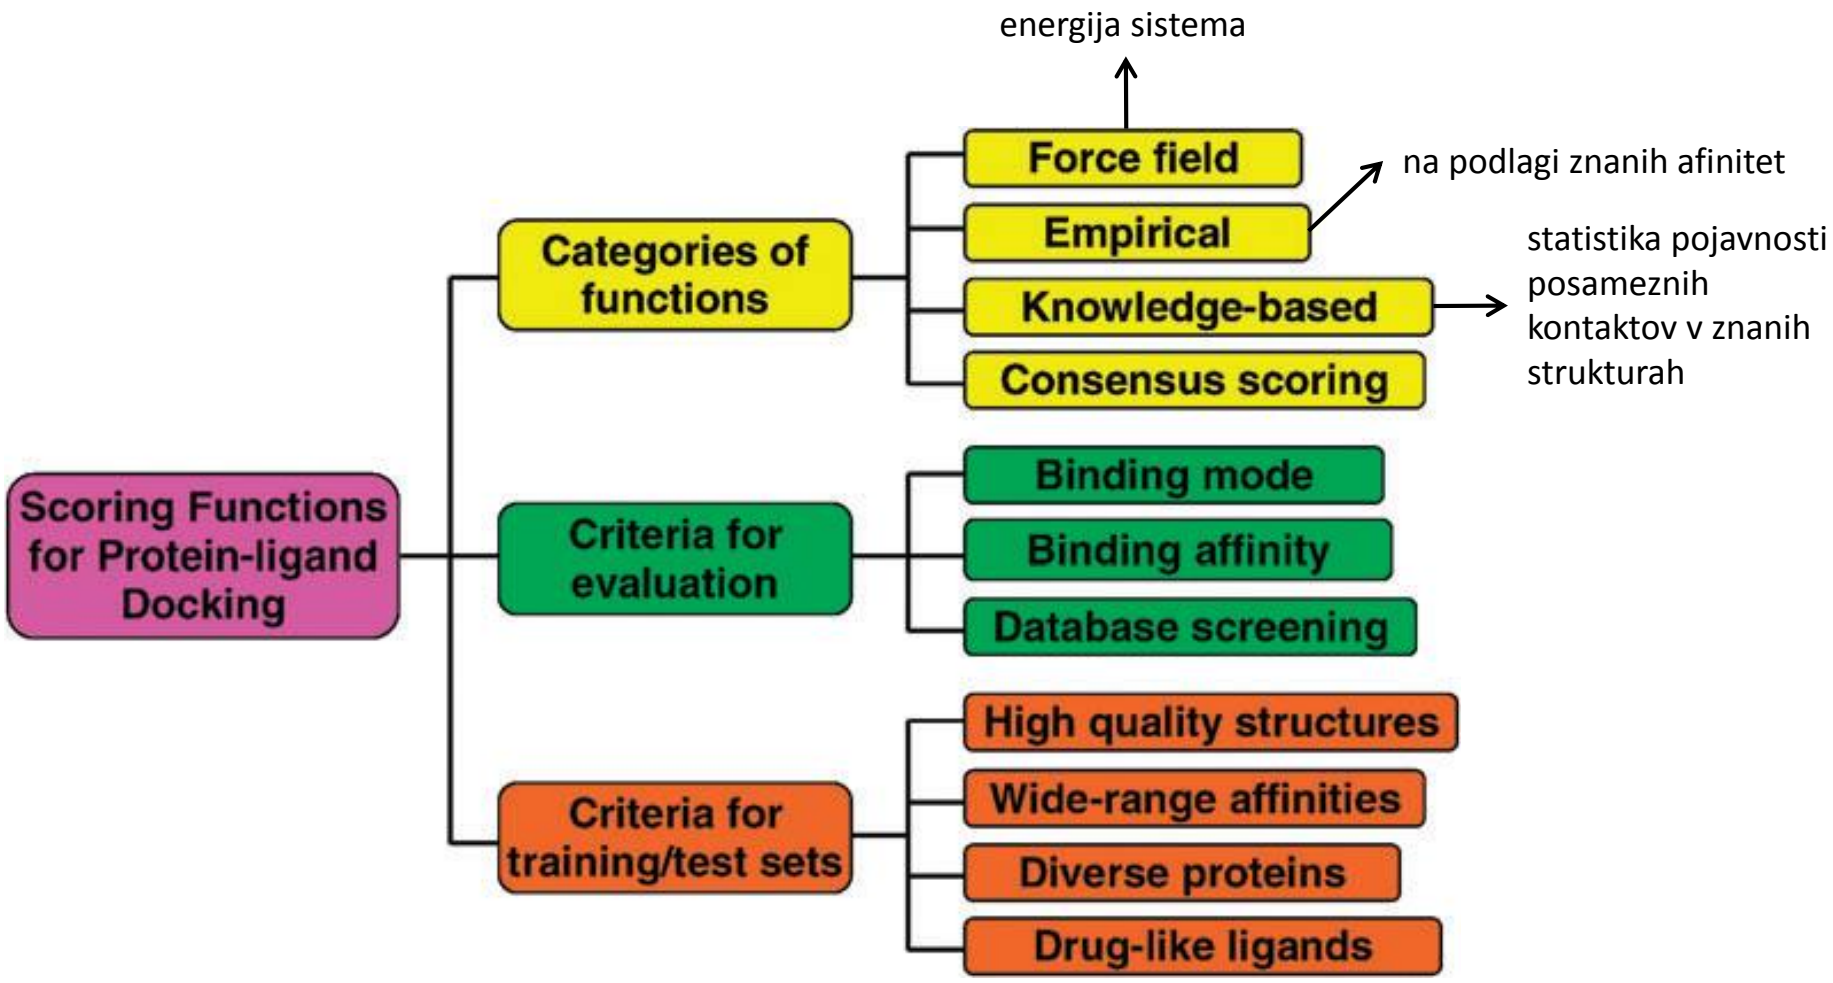


samo stranska veriga



stranska in glavna veriga

Molekulska umestitev – funkcije za vrednotenje



Molekulska umestitev – funkcije za vrednotenje

Examples of scoring function formulae

Scoring function formulae

$$V = W_{vdw}\sum_{i,j}\left(\frac{A_{ij}}{r_{ij}^{12}} - \frac{B_{ij}}{r_{ij}^{6}}\right) + W_{hbond}\sum_{i,j}E(t)\left(\frac{C_{ij}}{r_{ij}^{12}} - \frac{D_{ij}}{r_{ij}^{10}}\right) + W_{elec}\sum_{i,j}\frac{q_i q_j}{\epsilon(r_{ij})r_{ij}} + W_{sol}\sum_{i,j}\left(S_i V_j + S_j V_i\right)e^{\left(-r_{ij}^2/2\sigma^2\right)}$$

Extended force-field-based scoring function from AutoDock.

For two atoms i, j, the pair-wise atomic energy is evaluated by the sum of van der Waals, hydrogen bond, coulomb energy and desolvation. W are weighted factors for calibrate the empirical free energy.

$$\Delta G = \Delta G_0 + \Delta G_{rot} \times N_{rot} + \Delta G_{hb}\sum_{neutral\ H-bond} f(\Delta R, \Delta a) + \Delta G_{io}\sum_{ion\ init.} f(\Delta R, \Delta a) + \Delta G_{aro}\sum_{aro\ int.} f(\Delta R, \Delta a) + \Delta G_{lipo}{}_{lipo}$$

Empirical scoring function from FlexX.

ΔG is the estimated free energy of binding; ΔG_0 is the regression constant; ΔG_{rot} , ΔG_{hb} , ΔG_{io} , ΔG_{aro} and ΔG_{lipo} are regression coefficients for each corresponding free energy term; $f(\Delta R,\Delta\alpha)$ is scaling function penalizing deviations from the ideal geometry; N_{rot} is the number of free rotate bonds that are immobilized in the complex.

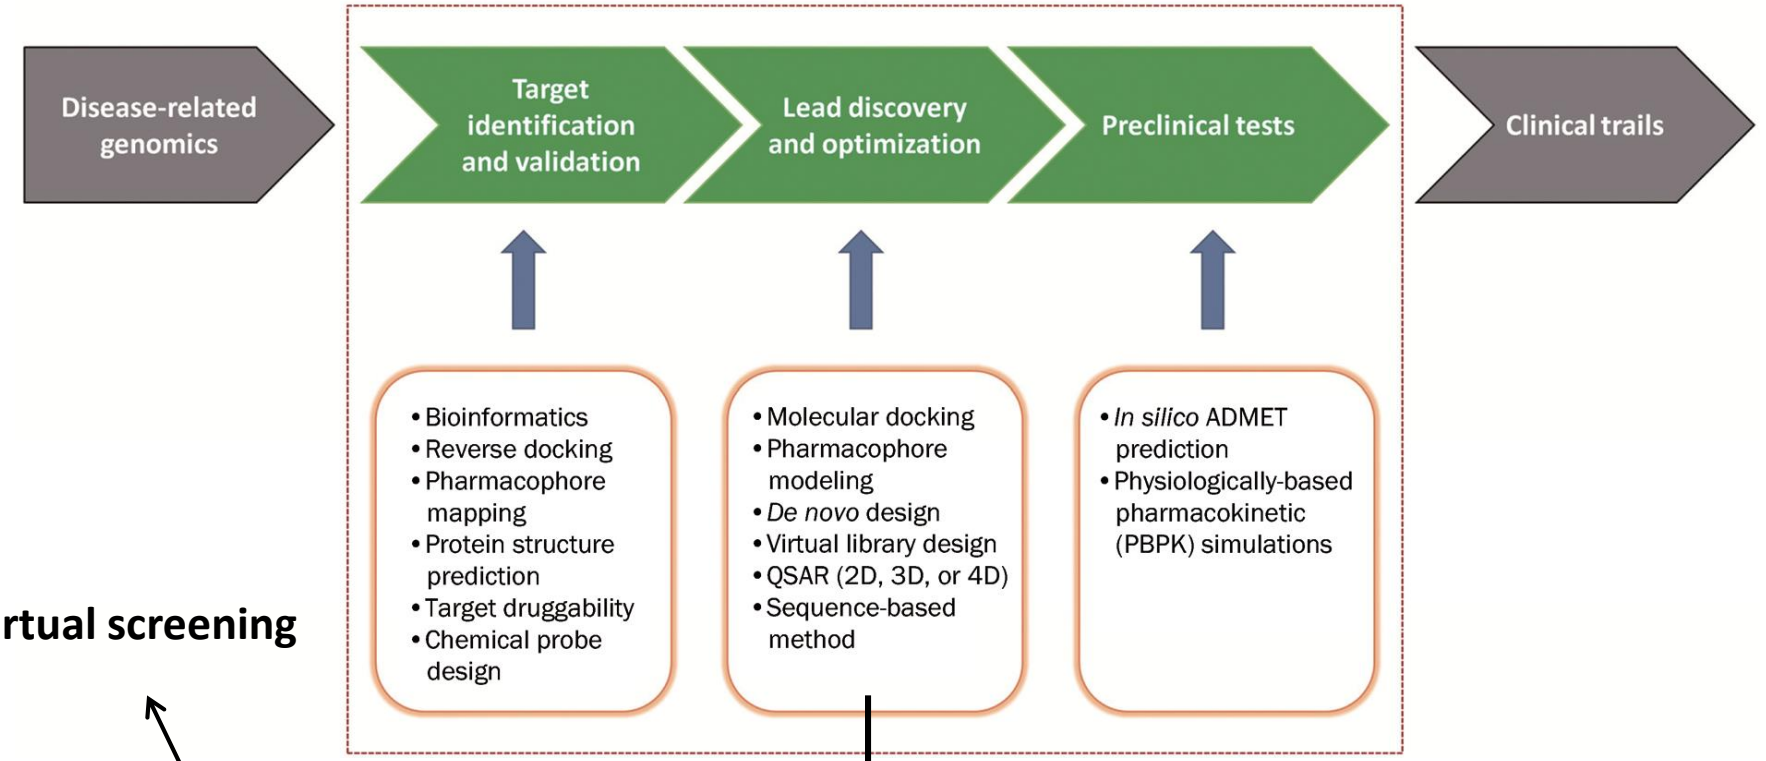
$$PM\_score = \sum_{\substack{kl \\ r<r_{cut-off}^{ij}}} A_{ij}(r) \qquad A_{ij}(r) = -k_B T \ln\left[f^{j}_{Vol\_corr}(r)\frac{\rho_{seg}^{ij}(r)}{\rho_{bulk}^{ij}}\right]$$

Knowledge-based scoring functions PMF.

k_B is the Boltzmann constant; T is the absolute temperature; r is the atom pair distance. $f^{j}_{Vol\_corr}(r)$ is the ligand volume correction factor; $\frac{\rho_{seg}^{ij}(r)}{\rho_{bulk}^{ij}}$ designates the radial distribution function of a protein atom of type i and a ligand atom of type j.

Umestitev majhnih molekul

Se najpogosteje uporablja pri iskanju novih učinkovin.

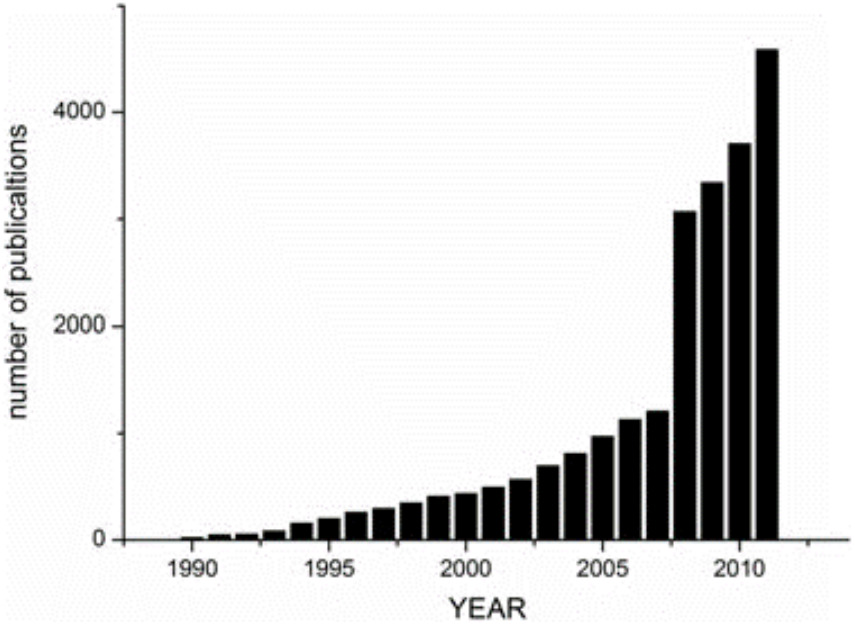


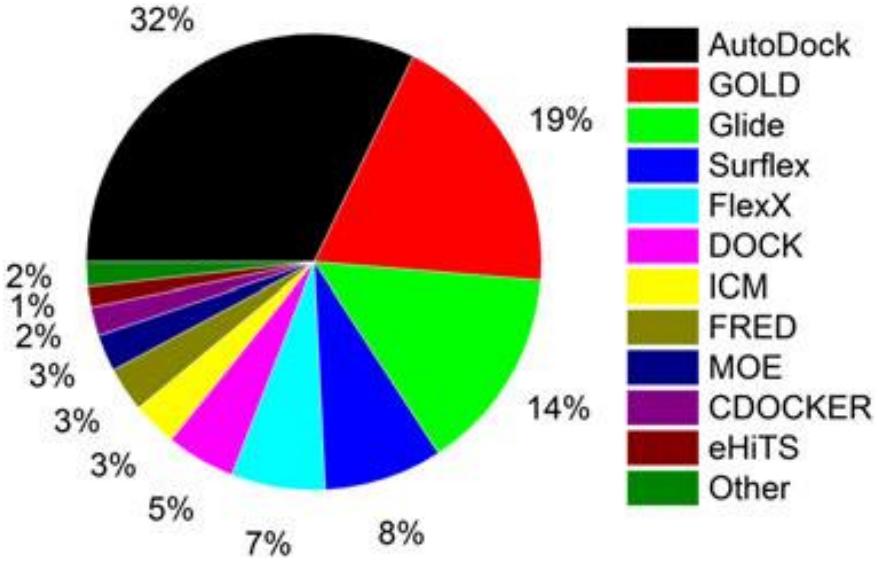
Virtual screening

high-throughput screening → **hit** to **lead** (H2L) → lead optimization

10^{-6} M 10^{-9} M

Umestitev majhnih molekul





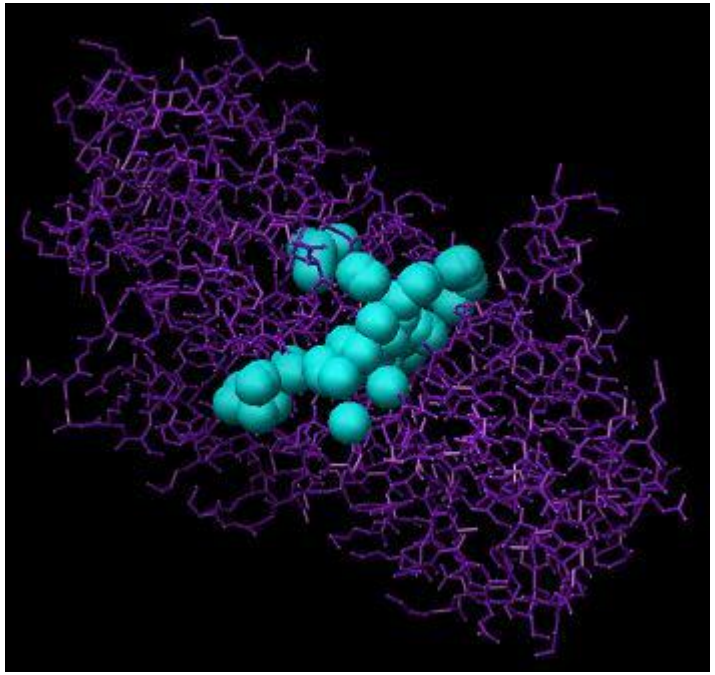
Število publikacij, ki vsebujejo rezultate umestitev.

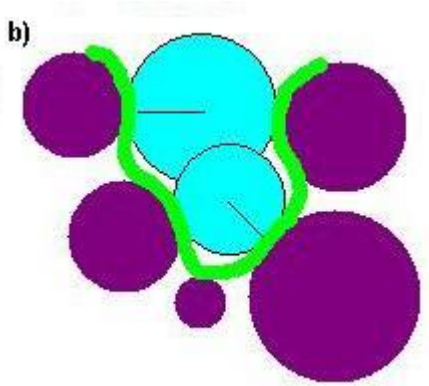
Dve temeljni obliki uporabe

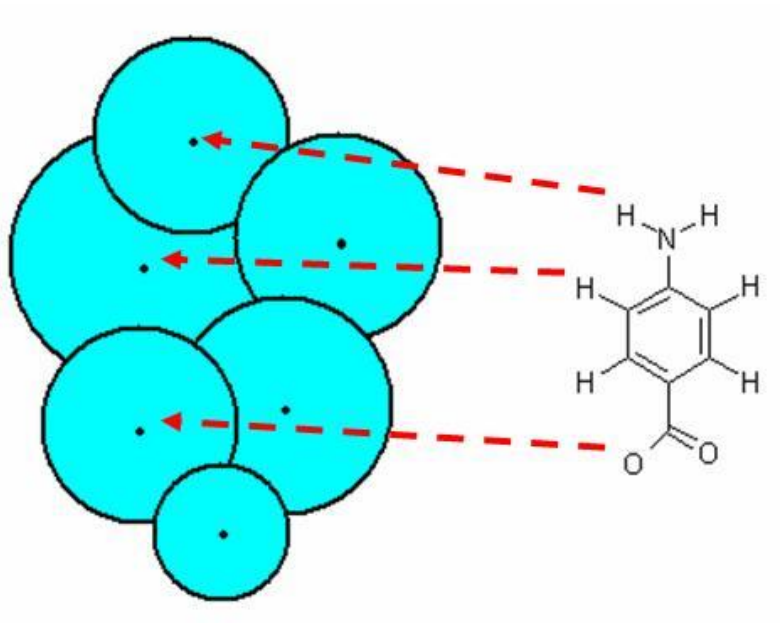
- Umestitev knjižnic spojin – hitreje, manj natančno
- Umestitev posameznih spojin – počasneje, bolj natančno

UCSF DOCK – rigidna umestitev

ustvarimo negativno sliko površne vezavnega mesta na receptorju s sferami definirane velikosti.







Rigidno molekulo liganda poskušamo pozicionirati v sfere, tako da težki atomi sovpadajo s centri sfer. Program ustvari nekaj sto različnih orientacij in za vsako izračuna energijo.

$$E = \sum_{i=1}^{lig} \sum_{j=1}^{rec} \left(\frac{A_{ij}}{r_{ij}^{12}} - \frac{B_{ij}}{r_{ij}^{6}} + \frac{q_i q_j}{\varepsilon(r_{ij}) r_{ij}} \right)$$

UCSF DOCK – fleksibilna umestitev

Postopek „anchor-and-grow“

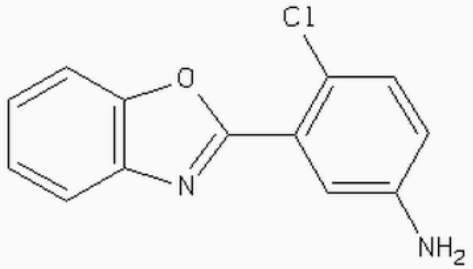
Molecule of the Week 122974



ZINC

Standard: For delivery in 0-10 weeks, including in-stock, make-on-demand and agent compounds
Clean: Stricter filtering rules have been applied — e.g. aldehyes and thiols have been removed
In Stock: For immediate delivery — typically less than 2 weeks
Boutique: Boutique compounds — you should be willing to "pay any price". These are NOT included in standard, clean and in stock subsets, where the target price is $100 or less per sample

More about ZINC subsets is here. ZINC may be used free of charge for research by individuals and institutions. **Whereas you are free to share the results of a ZINC search or a screen of molecules from ZINC, you may not redistribute major portions of ZINC without the express written permission of John Irwin.**

Makromolekulska umestitev

Nekatere komplekse je lažje napovedati kot druge.

Table 3. Classification of Proteic Complexes on the Basis of Docking Difficulty.

Type	ΔASA (Å^2)	ΔG_{des} (kcal/mol)	Cα RMSD	Expected difficulty of docking
I	1400–2000	<−4.0		Easy, unless key side-chains are in the wrong conformations
II	2000–3000		<2.0	Moderated difficulty
III	1400–2000	>−4.0		Very difficult almost unpredictable
IV	<1400			Very difficult
V	>2500		>2.0	Rigid-body methods always seem to fail

ROSIE: Rosetta Server that Includes Everyone

Robetta -- Protein Structure Prediction Server

RosettaDesign -- Protein Sequence Design Server

RosettaBackrub - Flexible Backbone Modeling and Design Server

Rosetta – The premier software suite for macromolecular modeling

Rosetta is the premier software suite for modeling macromolecular structures. As a flexible, multi-purpose application, it includes tools for structure prediction, design, and remodeling of proteins and nucleic acids. Since 1998, Rosetta web servers have run billions of structure prediction and protein design simulations.

Researchers use Rosetta to better understand treatments of infectious diseases, cancers, and autoimmune disorders. Further applications involve the development of vaccines, new materials, targeted protein binders, and enzyme design.

» Learn about the latest software releases

» Read the documentation

Rosetta began as a structure prediction tool, and has consistently been a strong performer in Critical Assessment of Structure Prediction (CASP) competitions. It has grown to offer a wide variety of effective sampling algorithms to explore backbone, side-chain and sequence space. Rosetta boasts broadly tested scoring (energy) functions and contains an unparalleled breadth of applications from folding to docking to design.

Rosetta is freely available to academic and government laboratories, with over 10,000 free licenses already in use. An active support forum allows users to easily collaborate within the broad research community of Rosetta users.

» Obtain a Rosetta license

- 8.5Å non-bonded cutoff, switching function, ε=10
- Ranking of rigid body docking solutions based on HADDOCK score defined as:

Rigid: $Score = 0.01\ E_{air} + 0.01\ E_{vdW} + 1.0\ E_{elec} + 1.0\ E_{desolv} - 0.01\ BSA$

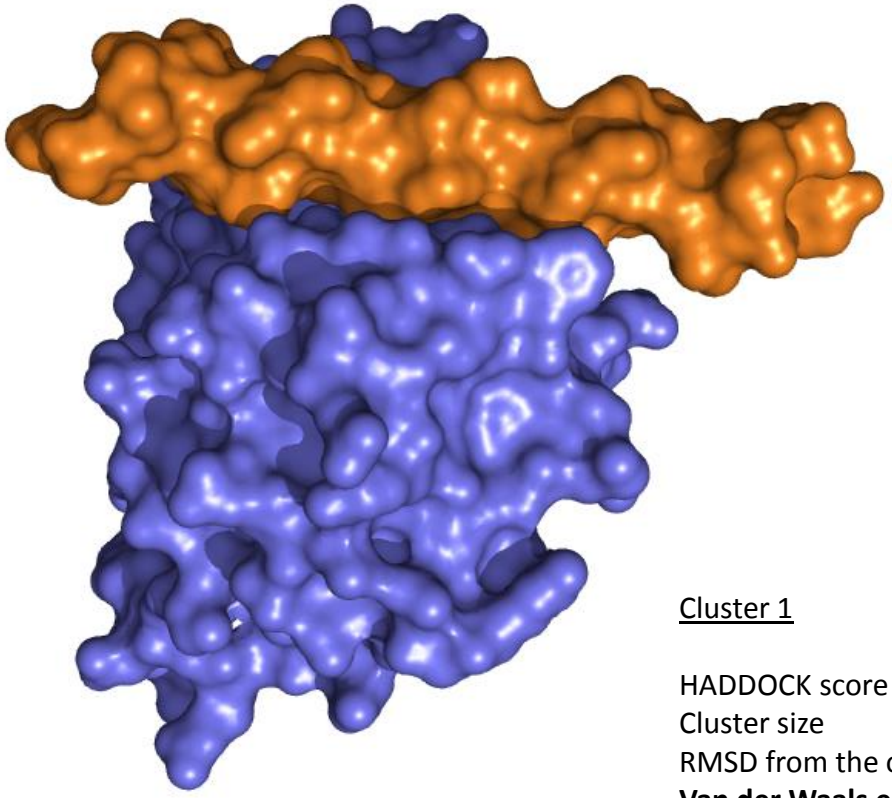
Flexible: $Score = 0.1\ E_{air} + 1.0\ E_{vdW} + 1.0\ E_{elec} + 1.0\ E_{desolv} - 0.01\ BSA$

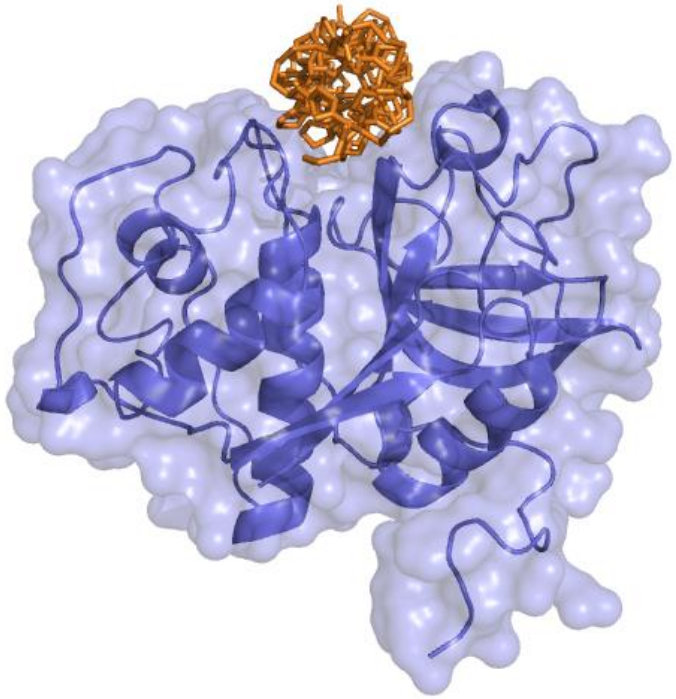
Water: $Score = 0.1\ E_{air} + 1.0\ E_{vdW} + 0.2\ E_{elec} + 1.0\ E_{desolv}$

- E_{air}: ambiguous interaction restraint energy
- E_{desolv}: desolvation energy using Atomic Solvation Parameters (Fernandez-Recio et al *JMB* 335, 843 (2004))
- BSA: buried surface area

HADDOCK

Primer: umeščanje trojne vijačnice kolagena tipa 1 v aktivno mesto katepsina K. Omejitve pri katepsinu so ostanki aktivnega mesta, pri kolagenu trije zaporedni ostanki na sredini trojne vijačnice.

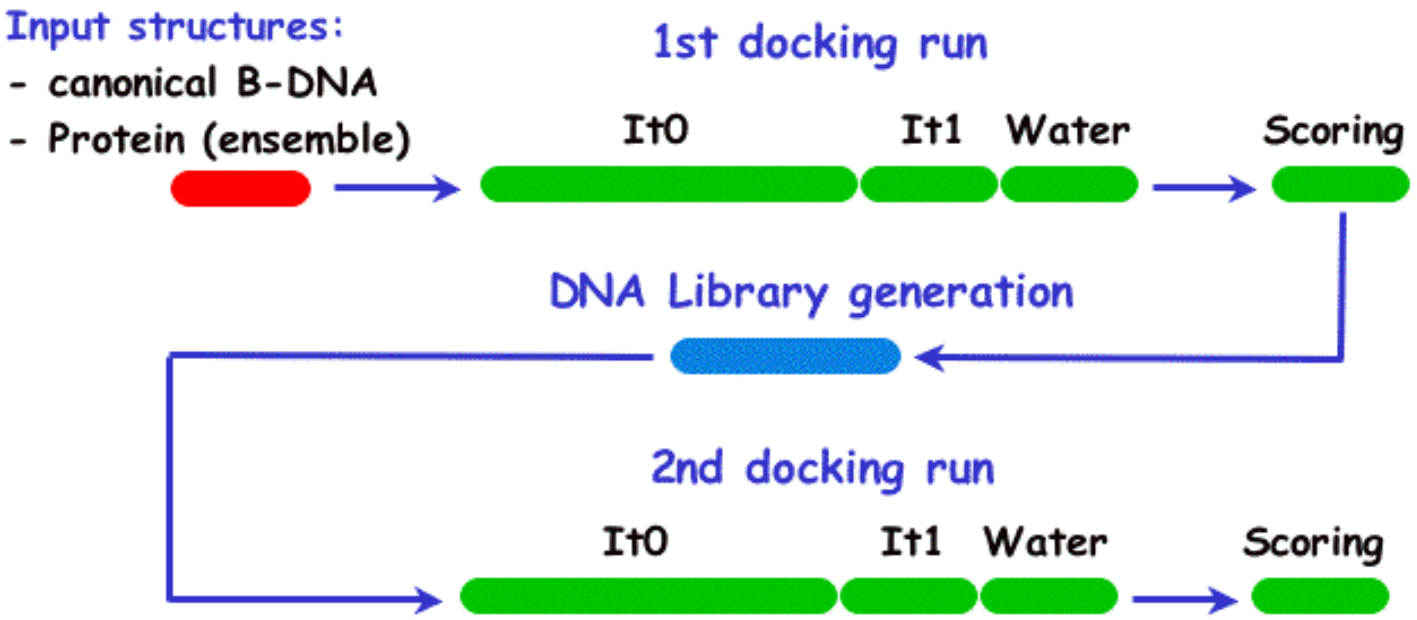




Cluster 1

HADDOCK score	-83.7 +/- 3.2
Cluster size	182
RMSD from the overall lowest-energy structure	2.9 +/- 0.7
Van der Waals energy	**-62.5 +/- 3.5**
Electrostatic energy	**-17.6 +/- 6.2**
Desolvation energy	**-23.0 +/- 3.3**
Restraints violation energy	53.4 +/- 30.69
Buried Surface Area	1431.1 +/- 63.8
Z-Score	-1.0

Protein-DNA HADDOCKing protocol



It0: rigid body docking It1: semi-flexible refinement Water: final refinement explicit solvent

Van Dijk *et al. Nucl. Acid. Res.* 2006

HADDOCK

Primer: vezava dimera stefina B na ssDNA (30G). „Eksperimentalne“ omejitve - napoved DNA-vezavnih motivov v stefinu B s temu namenjimi strežniki

	Kompleks 1 (levo)	Kompleks 2 (desno)
Van der Waalsova energija (kcal/mol)	-87.6 +/- 9.6	-87.0 +/- 4.9
Elektrostatska energija (kcal/mol)	-460.8 +/- 48.5	-531.2 +/- 25.6
Desolvatacijska energija (kcal/mol)	50.6 +/- 10.1	56.3 +/- 6.1

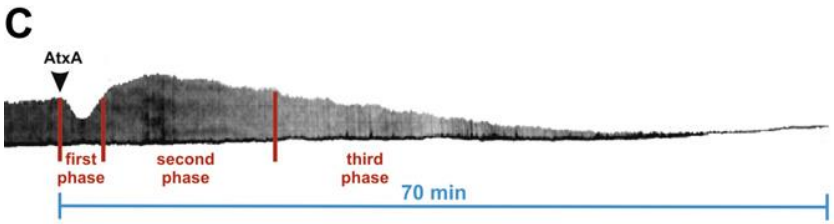
HADDOCK

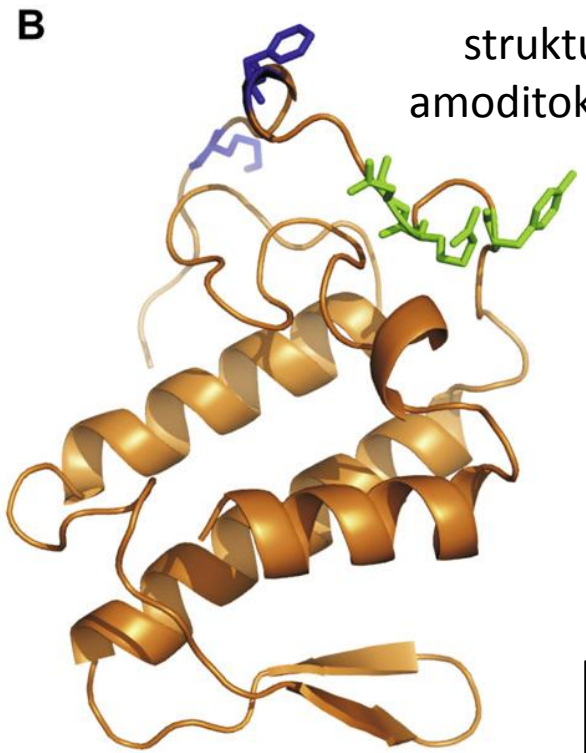
Primer: vezava dimera stefina B na dsDNA (30GC). „Eksperimentalne“ omejitve - napoved DNA-vezavnih motivov v stefinu B s temu namenjimi strežniki

	Kompleks 3	Kompleks 4
Van der Waalsova energija (kcal/mol)	-44.4 +/- 5.6	-56.1 +/- 2.8
Elektrostatska energija (kcal/mol)	-434.6 +/- 39.7	-470.2 +/- 47.7
Desolvatacijska energija (kcal/mol)	48.7 +/- 3.7	69.6 +/- 3.7

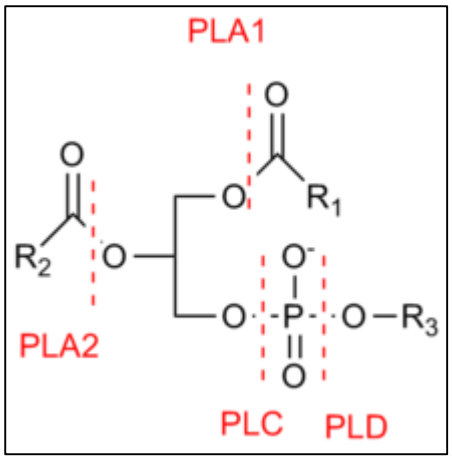
Kompleks amoditoksin/kalmodulin

Amoditoksini so presinaptično nevrotoksične sekretorne fosfolipaze A_2 iz strupa modrasa.





struktura amoditoksinov

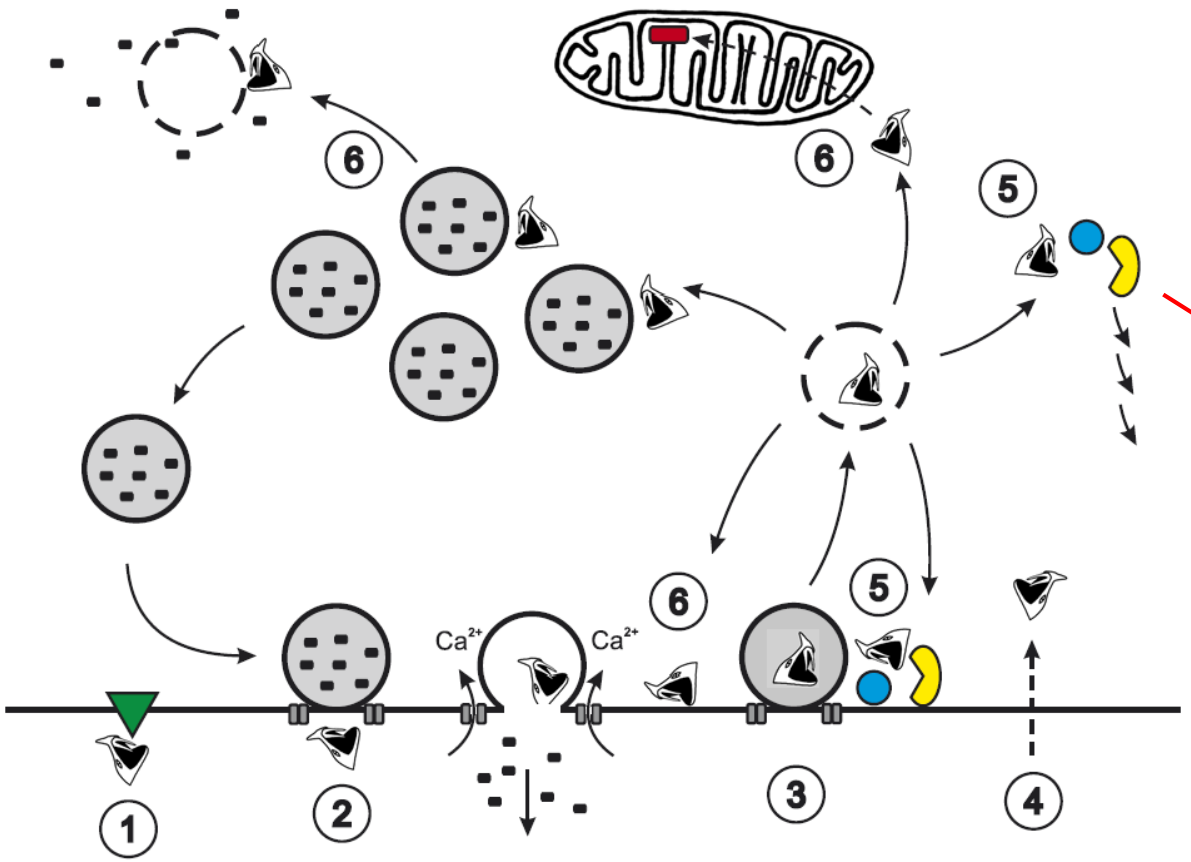


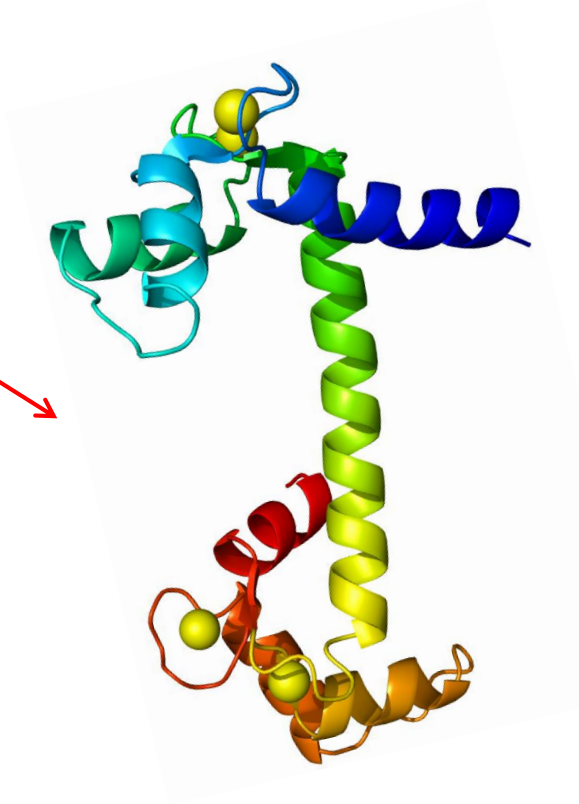
specifičnost fosfolipaz

Križaj (2011) Toxicon. 58

Kompleks amoditoksin/kalmodulin

Amoditoksini so presinaptično nevrotoksične sekretorne fosfolipaze A_2 iz strupa modrasa.

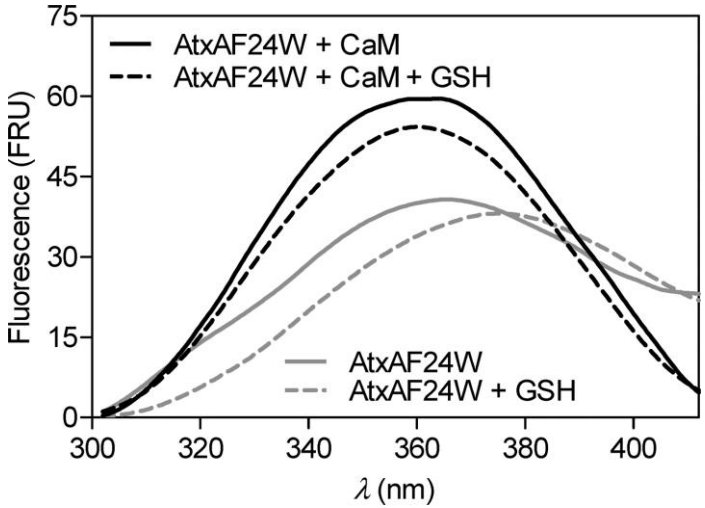




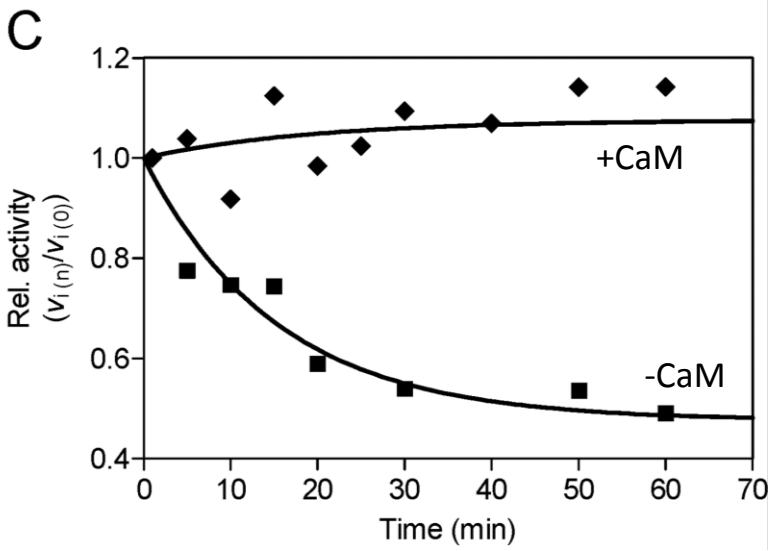
Križaj & Pungerčar (2007) Toxicon. 50

Kompleks amoditoksin/kalmodulin

Kalmodulin v citosolu tarčne celice deluje kot aktivator in stabilizator amoditoksinov.



Fluorescenčni spektri Atx v prisotnosti kalmodulina.

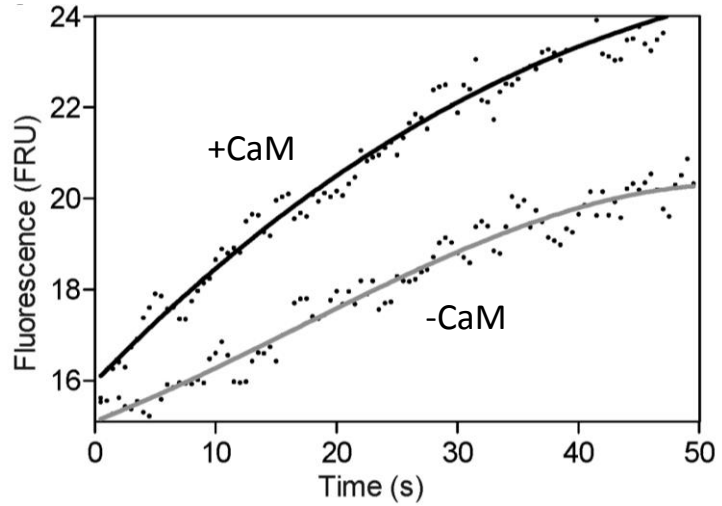


Kalmodulin poviša stabilnost Atx v citosolu.
(Merjena je preostala hitrost hidrolize sintetičnega substrata v citosolu podobnih pogojih)

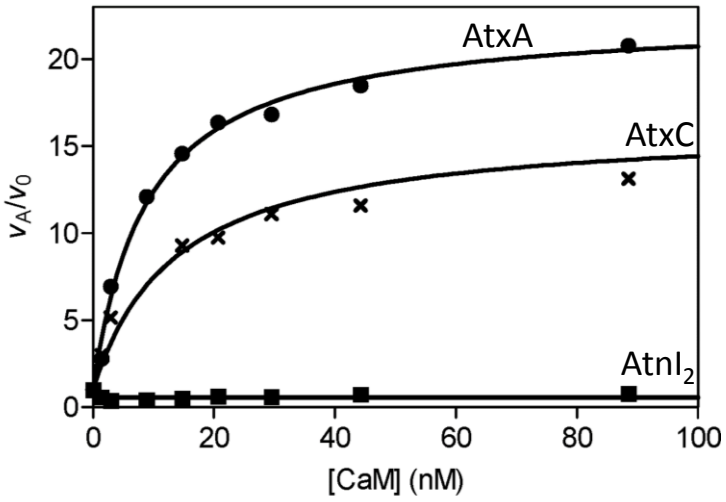
Kovačič et al. (2009) *Biochemistry*. 48(47)

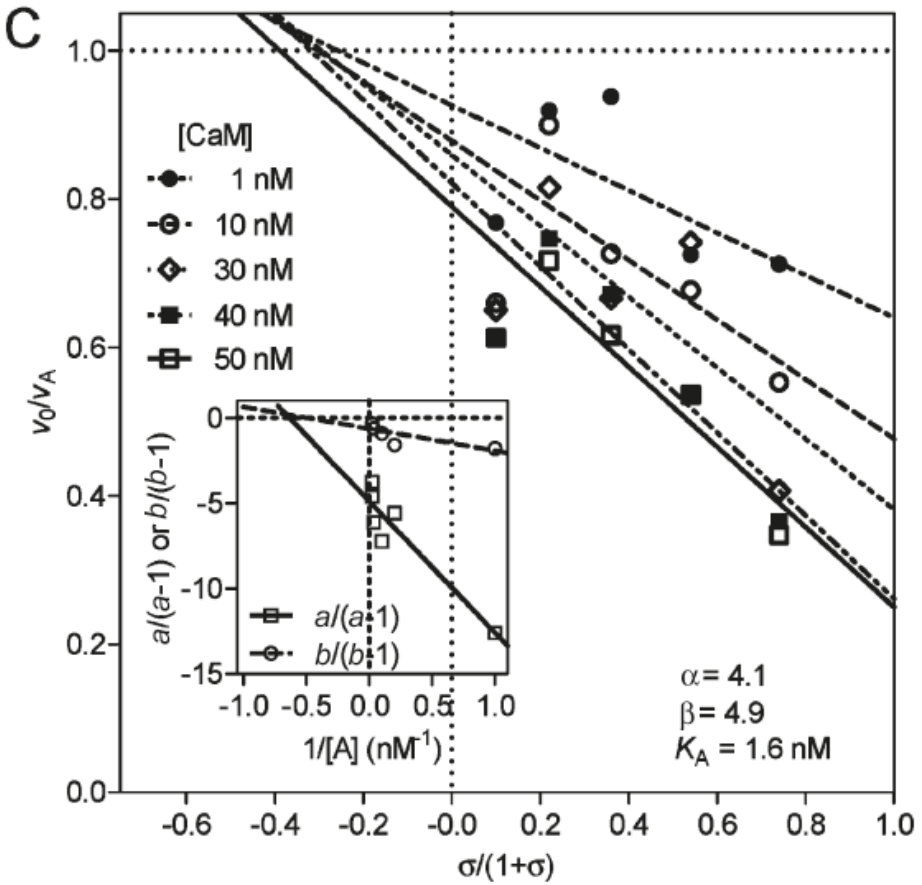
Kompleks amoditoksin/kalmodulin

Kalmodulin v citosolu tarčne celice deluje kot aktivator in stabilizator amoditoksinov.



„fitanje“ krivulj s polinomsko funkcijo za določanje v_0

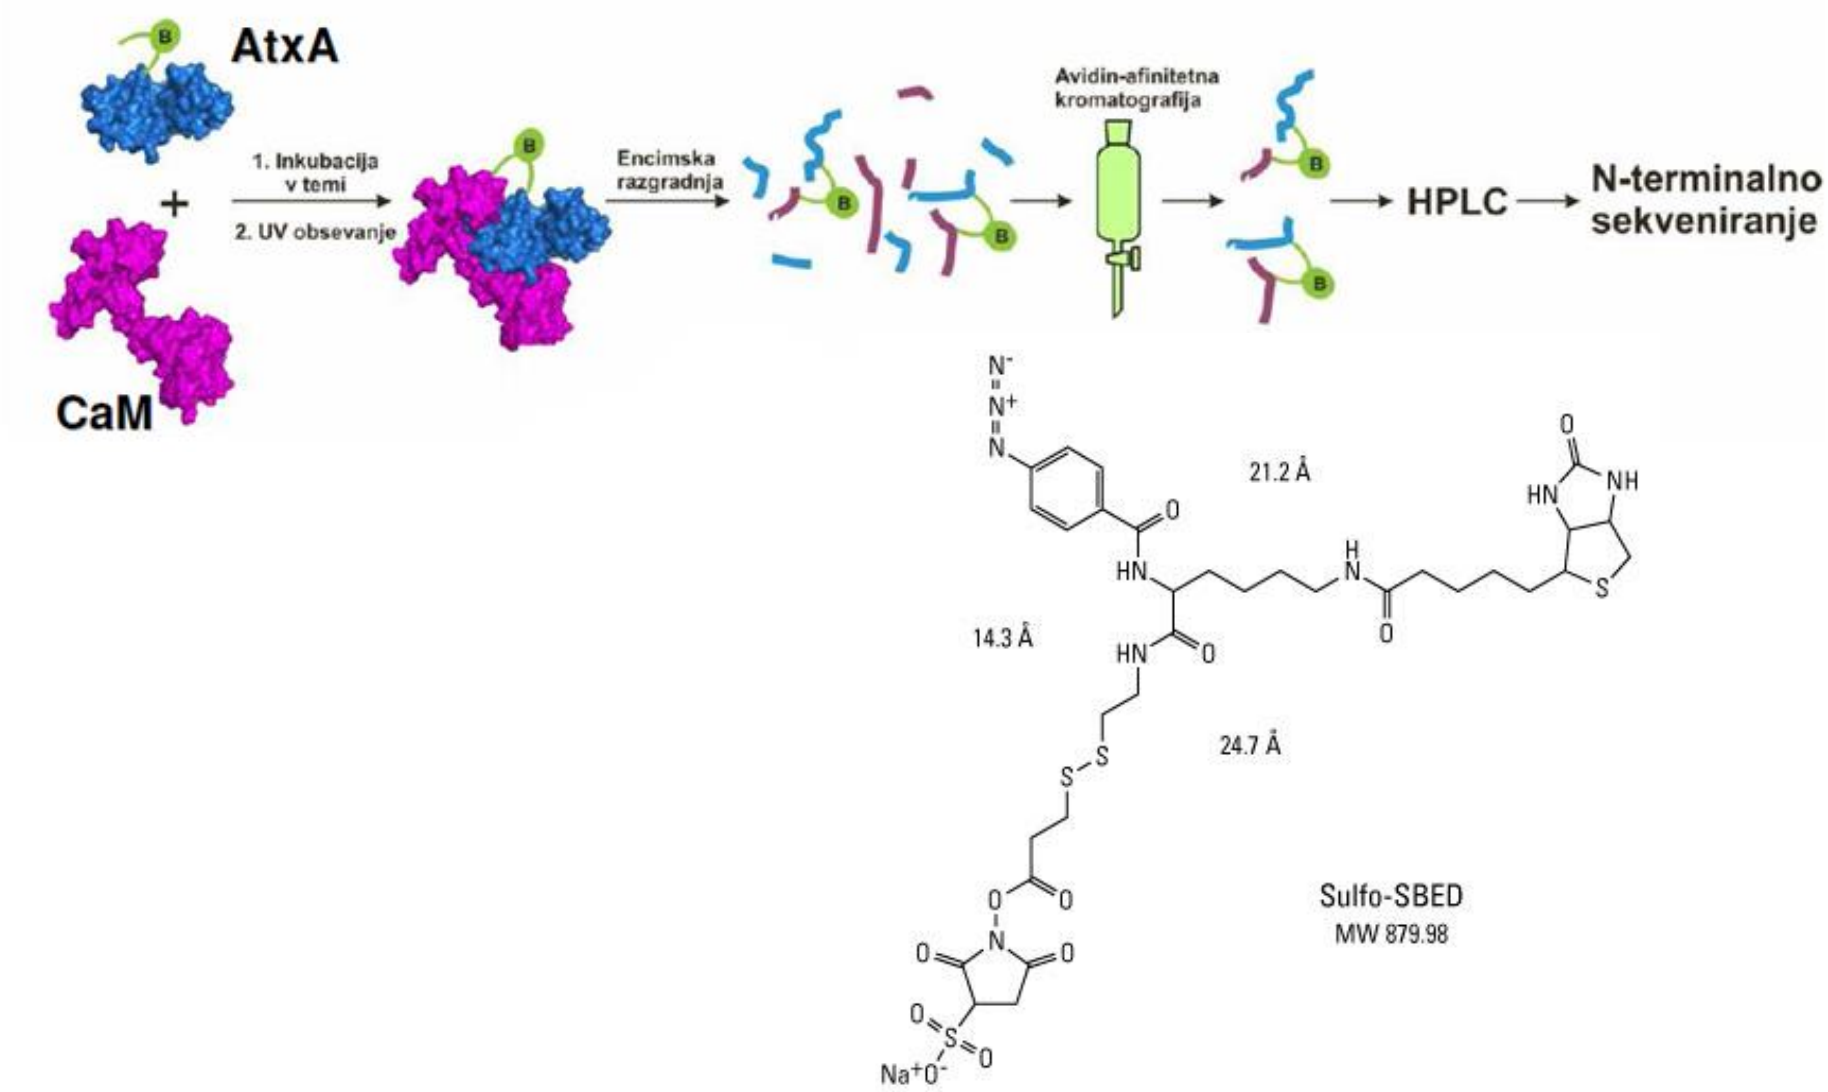




Kovačič et al. (2009) *Biochemistry*. 48(47)

Kompleks amoditoksin/kalmodulin

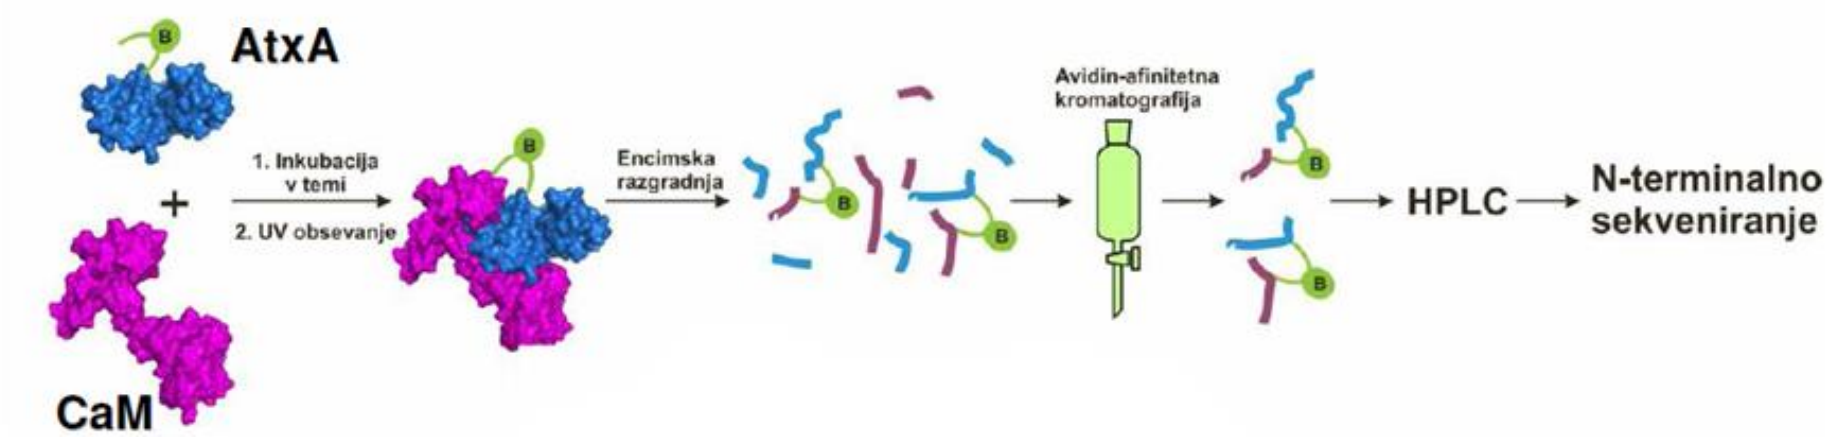
Mapiranje stične površine kompleksa med fosfolipazo amoditoksin A in kalmodulinom:



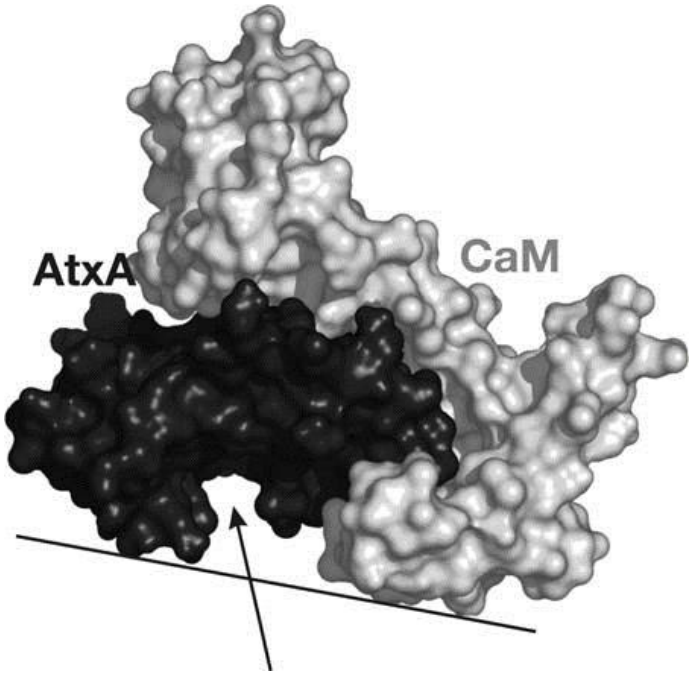
Kovačič et al. 2010. PEDS. 23(6)

Kompleks amoditoksin/kalmodulin

Mapiranje stične površine kompleksa med fosfolipazo amoditoksin A in kalmodulinom:



umestitev s programom Hex – ročna selekcija modelov, ki se skladajo z eksperimentalnimi podatki

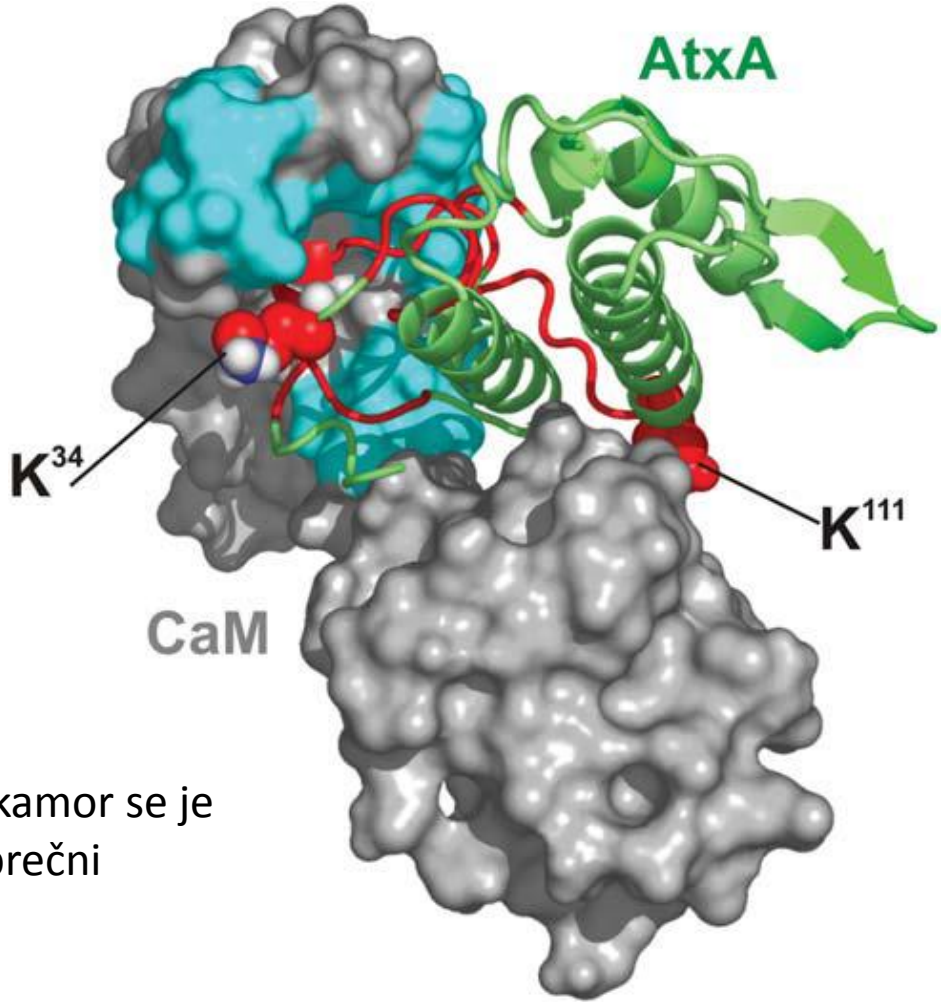


aktivno mesto je dostopno substratu

Kovačič et al. 2010. PEDS. 23(6)

Kompleks amoditoksin/kalmodulin

Mapiranje stične površine kompleksa med fosfolipazo amoditoksin A in kalmodulinom:



označena sta lizina, kamor se je najverjetneje vezal prečni povezovalec.

Kovačič et al. 2010. PEDS. 23(6)

Kompleks amoditoksin/kalmodulin

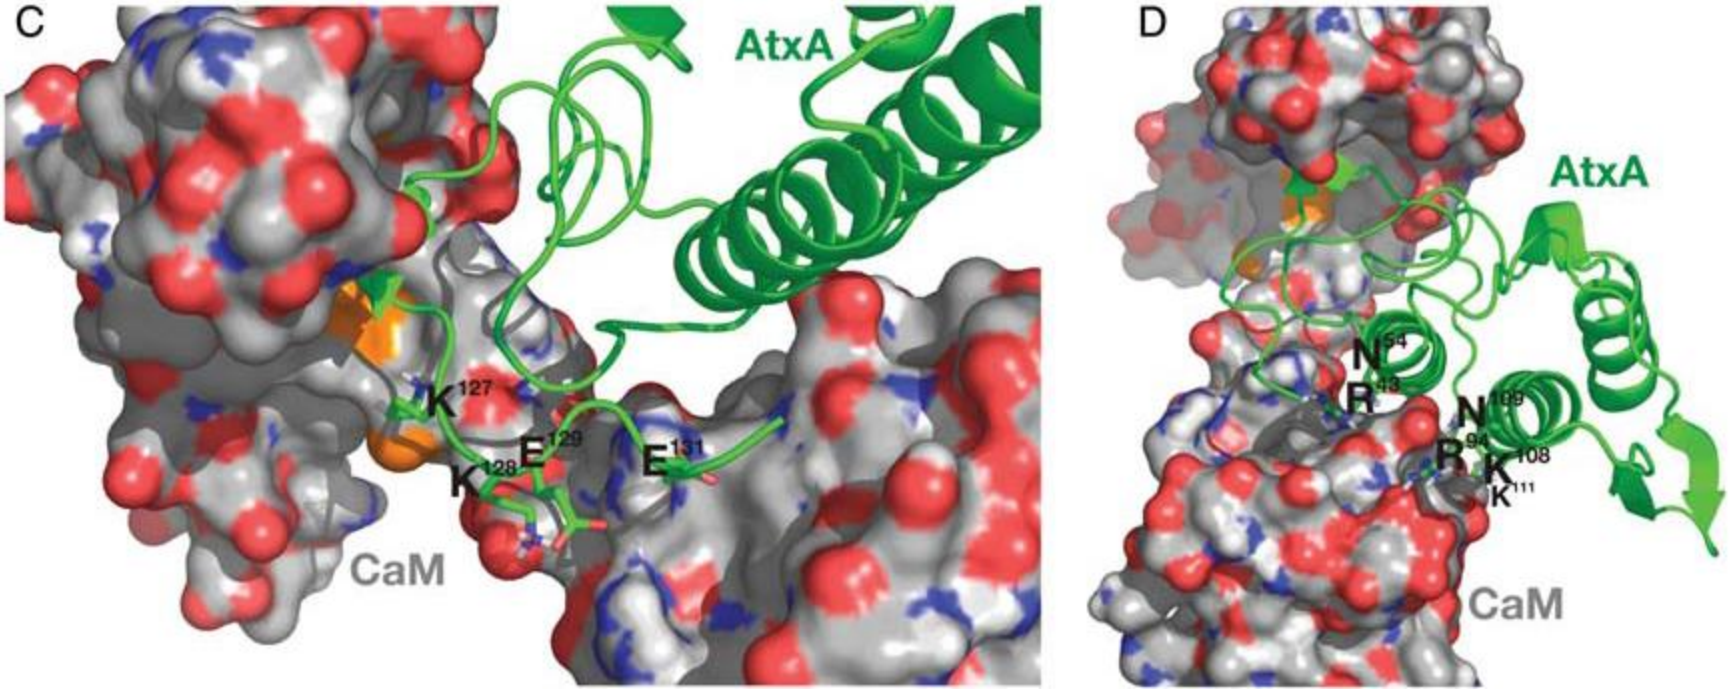


Table I. Interaction of snake venom and mammalian $sPLA_2$s with CaM and its effect on enzyme activity

Protein	Energy of the non-bonded interaction (kJ/mol)		$sPLA_2$–CaM complex formation
