Naloga 1: Nariši graf diferencialne upornosti dU/dI za tokovno odvisnost v datoteki *Korozija.dat*. To je meritev karakteristike $I-U$ za kovinsko elektrodo v določeni korozivni raztopini (prvi stolpec U [mV], drugi I [A]).

Naloga 2: Datoteka *body_acc.txt* vsebuje podatke o kartezičnih komponentah vektorja pospeška premikajoče se osebe (komponente x , y in z pospeška v enotah $g=9.81 \text{ m/s}^2$ so v prvem, drugem in tretjem stolpcu datoteke). Akcelerometer v mobilnem telefonu, ki ga je oseba nasila na pasu, je podatke o pospešku zapisoval s frekvenco 50 Hz. Nariši graf položaja osebe v odvisnosti od časa.

Naloga 3: V datoteki *prevajanje.dat* je podan temperaturni profil v 0.1 m debeli steni v odvisnosti od časa. V prvem stolpcu je podana oddaljenost (v metrih) meritne točke od levega roba stene, v ostalih stolpcih pa so temperature (v stopinjah Celzija) na teh mestih ob časih od 0 s do 180 s s korakom 1 s. (a) Kako se s časom spreminja toplotna tokova na obeh robovih stene? (b) Ob času $t=1$ min primerjaj krajevno odvisnost odvoda temperature po času s krajevno odvisnosjo drugega odvoda temperature po kraju.
