Opomba: V zgornjih nedoločenih integralih je povsod treba dodati splošno konstanto. V nekaterih integralih je uporabljen naslednji “adicijski izrek” za funkcijo arctg :

$$\operatorname{arctg} x \pm \operatorname{arctg} y = \operatorname{arctg} \frac{x \pm y}{1 \mp xy}.$$

Namen tega je le, da so formule krajše; vam rezultatov ni treba preoblikovati na ta način.
